

**Listing of Claims:**

This listing of claims will replace all prior versions, and listings, of claims in the application:

Claim 1 (previously presented): A container for holding albumin comprising: a flexible polymeric film formed into a bag having a cavity enclosed by a first wall, an opposing second wall joined thereto at a fold, and permanent seals about a periphery of the first and second walls, the seals joining an interior portion of the opposing first and second walls and creating a fluid-tight chamber within the cavity of the container, wherein a concentration of at least about 20% albumin is stored within the fluid-tight chamber.

Claim 2 (original): The container of claim 1, wherein a solution of sterile water and stabilizers is mixed with the concentration of albumin in the container.

Claim 3 (previously presented): The container of claim 1, wherein the bag has a plurality of peripheral edges that are sealed, and another peripheral edge that contains the fold.

Claim 4 (original): The container of claim 3, wherein three of the peripheral edges are sealed with heat, and one of the peripheral edges contains the fold that separates the first wall from the opposing second wall.

Claim 5 (original): The container of claim 3, wherein a fitment is connected to the container, the fitment having a passageway that cooperates with the fluid-tight chamber of the container.

Claim 6 (original): The container of claim 5, wherein the fitment is adjacent the fold.

Claim 7 (original): The container of claim 3, wherein the peripheral edge opposing the fold contains a first longitudinal seal and a second longitudinal seal, the first and second longitudinal seals joining the first and second opposing walls, and wherein an aperture is located between the first longitudinal seal and the second longitudinal seal, the aperture extending

through the first and second opposing walls.

Claim 8 (original): The container of claim 3, further comprising an aperture adjacent an edge opposing the fitment.

Claim 9 (original): The container of claim 3, further comprising at least one chevron seal in the fold.

Claim 10 (original): The container of claim 5, further comprising a chevron seal in the fold on opposing sides of the fitment.

Claim 11 (original): The container of claim 1, wherein the flexible polymeric film comprises a laminate having an outside layer of linear low density polyethylene, a gas barrier layer, a core layer of polyamide, and an inside layer of linear low density polyethylene.

Claim 12 (original): The container of claim 11, wherein the layers comprising the flexible polymeric film are bonded together with a polyurethane adhesive.

Claim 13 (previously presented): A container for albumin comprising:  
a flexible polymeric film formed into a bag having a cavity enclosed by a first wall, an opposing second wall, and seals about a periphery of the first and second walls, the seals joining an interior portion of the opposing first and second walls and creating a fluid-tight chamber within the cavity of the container, and a concentration of at least about 20% albumin being stored within the fluid-tight chamber; and an aperture in the film separate from the chamber.

Claims 14-21 (canceled)

Claim 22 (previously presented): The container of claim 1 wherein the albumin concentration is about 25%.

Claim 23 (previously presented): The container of claim 13 wherein the albumin concentration is about 20%.

Claim 24 (previously presented): The container of claim 13 wherein the albumin concentration is at least 25%.

Claim 25 (previously presented): The container of claim 13 wherein the albumin concentration is selected from the group consisting of a stabilized albumin solution, a pasteurized albumin solution, and combinations thereof.

Claim 26 (previously presented): The container of claim 13 further comprising a seal disposed between the chamber and the aperture.

Claim 27 (previously presented): The container of claim 13 further comprising a chevron seal.
